Sub-Challenge 1 - Use Copilot to Extend the Application!

This challenge is your opportunity to truly get handson with GitHub Copilot, GitHub Copilot works with you in your IDE to help you write code faster! Try and extend the application that you modernised in

Task 1

➢ Use GitHub Copilot to create a method/library for converting SAS dataset into CSV and JSON file

  ○ You can verify if the conversion is working file using online SAS dataset convertor online https://dumbmatter.com/sas7bdat/

Task 2

➢ Use GitHub Copilot to create a method/library for which can take the CSV file from the Task1 and generate a synthetic data but based on the original SAS/CSV data patterns and structure.
